Voltage	■
Power	■
Tests	■

PROFESSIONAL

Simply versatile

Offer your customers, your guests, your staff and yourself top-quality coffee at its best. Users and coffee connoisseurs alike are singing the praises of the IMPRESSA X9. Whether it's for the office, a bar, a hard-dressing salon, car showroom, seminar or gas station, it delivers the goods in any environment. Operating it is child's play, even for people with little or no experience of fully automatic machines. The display dialogue system, with its clear text display and easily understood graphics, takes you through the entire process. And with its elegant design and first-class materials, the IMPRESSA X9 is at home in any surroundings.

Coffee specialities

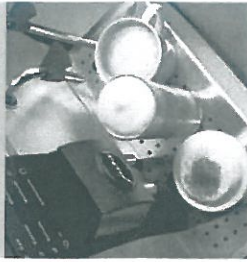

Although the IMPRESSA X9 is able to conjure up more than 20 coffee specialities, each of them adapted to your own personal taste, using the machine couldn't be simpler. The backlit keys and switches produce the desired coffee speciality in seconds – literally giving you enjoyment at the push of a button. Whether it's ristretto, espresso, café au lait, coffee served in a glass, cappuccino or a fashionable latte, all that counts is your taste! And preparing up to 100 cups of coffee a day presents absolutely no problem either.

Two precision grinders

To meet the demands of particularly choosy coffee connoisseurs, the machine comes with two precision grinders. The two bean hoppers, each holding 650 g, can be filled with different coffee varieties and combined to satisfy individual needs – and that for each product! Of course, you can select your preferred fineness for the two coffee blends individually and thanks to the active bean management system, you'll know exactly when you have to refill your favourite blend.

Simple operation

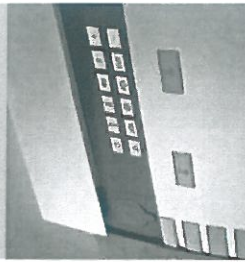

The platinum-plated cover slides elegantly upwards to reveal the programming panel with a vast range of possible settings. This is also where you can start the various cleaning, maintenance and descaling programs or activate the integrated cup counter. And if you prefer to restrict programming authorization to a limited circle of users, nothing could be simpler. All you need to do is generate code groups.
